Max Westmoreland

Austin, TX | 512.970.4231 | mw.maxwestmoreland@gmail.com | LinkedIn | GitHub | Portfolio

EDUCATION

Texas State University, San Marcos, TX | B.S. Computer Science, Minor in Business Administration — Summer 2026
Continued Education | AWS Solutions Architect Certification — Completion Exp. Nov 2026

TECHNICAL SKILLS

Languages: Python, Java, JavaScript, TypeScript, C++, C#
Backend & Data: SQL, REST APIs, CRUD, Database Design
Web & Frontend: React, Three.js, HTML5, CSS, JSON
Tools: Git/GitHub, Docker, Linux/Unix, VS Code, Unity Engine, Trello
AI & Automation: Multi-Agent Systems, LLM Integration (Claude Code, Ollama), RAG Pipelines, Chrome Extension Development
Systems & Security: Network Security, Vulnerability Assessment, Bash Scripting
Engineering Fundamentals: Object-Oriented Programming, Data Structures & Algorithms, Software Development Lifecycle
Execution & Collaboration: Agile (Scrum), Requirements Gathering, Technical Documentation

WORK EXPERIENCE

Software Engineer | Drivia, Austin, TX — **June 2026 – Present**

- Develop new features and functionality across the company's SaaS products using Python, React, and PostgreSQL.
- Audit and refactor AI-generated codebases to improve security, reliability, and maintainability.
- Identify and fix security vulnerabilities, including missing auth checks and unvalidated inputs, and address compliance gaps.

Personal Shopper | H-E-B, Wimberley, TX — **August 2023 – Present**

- Use internal systems to track orders, validate item availability, and maintain data accuracy in a high-volume environment.
- Identify workflow inefficiencies during peak periods and collaborate with team members to reduce bottlenecks.

TECHNICAL PROJECTS

Zurg | Autonomous Multi-Agent e-Commerce Platform
Technologies: Claude API, OpenClaw, Ollama, RAG

- Built an autonomous multi-agent platform that automates a print-on-demand e-commerce business from design through fulfillment.
- Implemented a RAG knowledge layer, secret management, human approval workflows, and real-time WhatsApp notifications.
- Generates approx. $500 in monthly revenue with minimal maintenance.

Bobcat Plus | AI-Enhanced Chrome Extension – Hook 'Em Hacks Hackathon
Technologies: JavaScript, Chrome Extension APIs, AI Integration

- Built an AI-powered Chrome extension that enhances Texas State University's course registration experience.
- Architected the backend service layer and AI integrations, powering real-time functionality.

HosterWatch | Domain Health Monitoring Platform – Senior Capstone Project
Technologies: Node.js, Express, PostgreSQL, React

- Designed, built, and deployed a domain health monitoring web application.
- Developed the backend architecture and presented project design, milestones, and technical decisions to faculty.

Mountory | Full-Stack Inventory Management Application
Technologies: Python, FastAPI, React, PostgreSQL

- Architected and developed a full-stack inventory management application for my own 3D printing business, owning the complete SDLC from requirements through deployment.
- Implemented REST APIs for CRUD operations between the FastAPI backend and React frontend, with a normalized PostgreSQL schema and optimized queries.
